RELEASE: What's in YOUR Ice?

Naples Royal Palm Golf Club is FIRST in SWFL to Install *Eco3Ice* Ice Machine Sanitation Devices

The Royal Palm Golf Club of Naples, Florida became the FIRST business in SWFL to benefit with the *Eco3Ice* antibacterial ice protection devices for all of their Golf Course and Clubhouse ice machines!

“Our Club is proud to be the first SWFL to upgrade our Ice Machines using *Eco3Ice*. We are firmly committed to the health of our members, guests and staff. We know that adding *Eco3Ice* for ice machine sanitation will improve our already aggressive suite of tools we use to daily protect everyone at the Club and on the course!” comments Ben Heatherington, General Manager.

Traditional water filters only soften and filter most chemicals and minerals ... they do NOTHING about bacteria, microbes and other pathogens! ENOZO’s *Eco3Ice* device uses a unique, diamond-based technology to continuously treat incoming water used by ice machines, sanitizing the water and the entire ice-making path.

Golf Superintendent Mike Sankey says “I’ve always been concerned on what happens to our ice machines out on the course in the extreme FL heat and humidity. We know that we get much more mold buildup than the ones in our Clubhouse. With *Eco3Ice*, we finally have an economical solution to improve ice machine sanitation and effectively eliminate mold buildup and germs.”

Eco3Ice operates on-demand to create a small but highly effective amount, of “Aqueous Ozone” – nature’s own sanitizer – that continuously treats ice machine interiors, storage bins, remote bins and drains. This process kills over 99.9% of a wide range of bacteria, germs and pathogens (including Legionella, E. coli, Strep, Salmonella and others). It also reduces mold and biofilm buildup, extending time between cleanings and the life of the machine, saving money while sanitizing!

Eco3Ice is provided by **ENOZO Technologies, Inc.** (Lakeland, FL), inventors of state-of-the-art, non-toxic, water-based sanitizing, cleaning and deodorizing devices for industrial and consumer use. All of their devices use their patented **ADEPT** technology (Active Diamond Electrolytic Process Technology).
